This visualitation is regarding the unemployment rate in the city of Manizales (Colombia) for first semestrer of Covid-19 Pandemic year 2020 and current year 2021. The data is acquired from DANE (Administrative National Departent of Statistics), which is the most reliable source in the country in terms of statistics of any kind.

 It can be evidenced that for the first semester of 2020 year, where pandemic was gaining strength and citizens around the world were ordered to lockdown by governments, the rate of unemployment raise up to 26.65%, 10 points aver it starting value, reaching the maximum in history. For 2021 year, unemployment rate has decreased considerably reaching 16.36% rate, but despite the re-open of many sectors of work authorized by the government, there is no proof of complete recovery in short term.

truthfulness: It fulfill Cairos principle since the information has been taken from the most reliable source of the country. Data is open to the public and can be analyzed.

Functionality: It fulfill Cairos principle since it is easy to compare the values on the graphic. To achieve this, basic grid was omitted, mayor and minor thicks was deleted, left labeling was replaced by direct labeling on the bars

Beauty: It fulfill Cairos since it is clear to read, compare and understand. To make it possible, delimiting lines of the figured was removed, texts are clear, kind and size of font was thought to be easy for reading.

Insightful: It fulfill Cairos principle since the understanding and conclusion of the visualization are clear, logic and easy to identify. This principle its achieved since all the principles work together with synergy.
